INDUCTION LOOPS

The induction loop constitutes the sensitive element of the magnetic detection system. Its quality and its installation ensure the performance of the system.

Capsys provides a range of ready-to-install inductive loops to ensure fast and reliable installation of your system

BENEFITS

- Fast installation time
- Easy to install
- Detection quality

APPLICATIONS

- Door/gate access control
- Vehicle priority at traffic light
- Magnetic and/or selective detection

Operating principle

The inductive loop must be used with detectors:

- for classic road or access applications requiring magnetic detection, the loop must be associated with Capsys ST magnetic detectors
- for vehicle priority requiring a selective detection or a combined selective and magnetic detection, the loop must be associated with Capsys IVR selectvie detectors.

Technical characteristics

WAB-0-101	Perimeter 6m Feeder cable 10m Inductance 24µh 2 windings
WAB-0-102	Perimeter 9m Feeder cable 10m Inductance 36µh 2 windings
WAB-0-103	Perimeter 12m Feeder cable 10m Inductance 48µh 2 windings
